

KEYERA

PROJECT HISTORY

- June 2014** Construction commenced
- Aug 2015** Operations began

JOSEPHBURG TERMINAL

Headquartered in Calgary with operations focused in Western Canada, KEYERA operates an integrated Canadian-based midstream business with extensive interconnected assets and depth of expertise in delivering midstream energy solutions.

Our business consists of natural gas gathering and processing, natural gas liquids (NGLs) fractionation, transportation, storage and marketing, iso-octane production and sales and diluent logistic services for oil sands producers.

We are committed to conducting our business in a way that balances diverse stakeholder expectations and emphasizes the health and safety of our employees and the communities where we operate.

Josephburg Terminal

The Josephburg terminal is located near Keyera's fractionation and storage facility in Fort Saskatchewan.

The Terminal was developed in response to the growth in propane production and allows for essential egress of propane from Western Canada. It features a loading and offloading rail rack, rail storage spurs and above ground product storage facilities. The Terminal has a capacity of 42,000 Bbls/d.

Josephburg has several upstream and downstream pipeline connections enabling high and low vapour pressure products to be handled at the Terminal. Connections include but are not limited to the Fort Saskatchewan Facilities pipelines and Fort Saskatchewan Condensate System.
