Headquartered in Calgary with operations focused in Western Canada, KEYERA operates an integrated Canadian-based midstream business with extensive interconnected assets and depth of expertise in delivering midstream energy solutions.

Our business consists of natural gas gathering and processing, natural gas liquids (NGLs) fractionation, transportation, storage and marketing, iso-octane production and sales and diluent logistic services for oil sands producers.

We are committed to conducting our business in a way that balances diverse stakeholder expectations and emphasizes the health and safety of our employees and the communities where we operate.

**Simonette Gas Plant**

Located approximately 92 kilometres southwest of the town of Valleyview, Alberta, the Simonette gas plant is a sour gas processing and liquids stabilization plant supporting liquids-rich Montney and Duvernay development in the area. The plant receives its raw gas and raw liquids from an extensive network of pipelines that service key production areas/zones in Alberta, and offers a full range of gas processing services including NGL recovery, condensate stabilization, and sour gas sweetening. The plant has acid gas injection facilities which provide the most reliable and environmentally responsible method to deal with sour gas, virtually eliminating carbon emissions as compared to other acid gas handling processes.
