Headquartered in Calgary with operations focused in Western Canada, KEYERA operates an integrated Canadian-based midstream business with extensive interconnected assets and depth of expertise in delivering midstream energy solutions.

Our business consists of natural gas gathering and processing, natural gas liquids (NGLs) fractionation, transportation, storage and marketing, iso-octane production and sales and diluent logistic services for oil sands producers.

We are committed to conducting our business in a way that balances diverse stakeholder expectations and emphasizes the health and safety of our employees and the communities where we operate.

Wapiti Gas Plant

Located approximately 60 kilometres southwest of Grande Prairie, the Wapiti gas plant is a sour gas processing and liquids stabilization plant supporting liquids rich Montney development in the area. The plant includes acid gas injection facilities; the most reliable and environmentally responsible method to deal with sour gas, virtually eliminating carbon emissions as compared to other acid gas handling processes.

In May 2019, Phase I of the plant commenced operations with gas processing capacity of 150 mmcf/d, and condensate handling capacity of 25,000 bbls/d. Phase II of the plant has been approved and is expected to be commissioned in Q4, 2020 adding an additional 150 mmcf/d of capacity.
